

200-mA Low-Noise, High-PSRR, Negative-Output, Low-Dropout Linear Regulators

Check for Samples: TPS72301-Q1, TPS72325-Q1

FEATURES

- **Qualified for Automotive Applications**
- Ultralow Noise: 60 µV_{RMS} Typical
- High PSRR: 65 dB Typical at 1kHz
- Low Dropout Voltage: 280 mV Typical at 200 mA, 2.5 V
- Available in -2.5 V and Adjustable (-1.2 V to -10 V) Versions
- Stable With a 2.2-µF Ceramic Output Capacitor
- Less Than 2-µA Typical Quiescent Current in Shutdown Mode
- 2% Overall Accuracy (Line, Load, Temperature)
- **Thermal and Overcurrent Protection**
- SOT23-5 (DBV) Package
- Operating Junction Temperature Range: -40°C to 125°C

Typical Application Circuit IN OUT 2.2µF ΕN 10nF GND

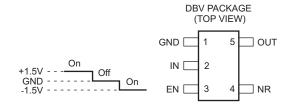

APPLICATIONS

- **Optical Drives**
- **Optical Networking**
- **Noise-Sensitive Circuitry**
- **GaAs FET Gate Bias**
- **Video Amplifiers**

DESCRIPTION

The TPS723xx-Q1 family of low-dropout (LDO) negative voltage regulators offers an combination of features to support low-noise applications. This device is capable of operating with input voltages from -10 V to -2.7 V. The TPS72325-Q1 regulator is stable with small, low-cost ceramic capacitors, and includes enable (EN) and noisereduction (NR) functions. Internal detection and shutdown logic provide thermal short-circuit and overcurrent protection. High PSRR (65 dB at 1 kHz) and low noise (60 µV_{RMS}) make the TPS723xx-Q1 ideal for low-noise applications.

The TPS723xx-Q1 uses a precision voltage reference to achieve 2% overall accuracy over load, line, and temperature variations. Available in a small SOT23-5 package, the TPS723xx-Q1 specification covers the full temperature range of -40°C to 125°C.

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet. All trademarks are the property of their respective owners.

This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

FUNCTIONAL BLOCK DIAGRAM

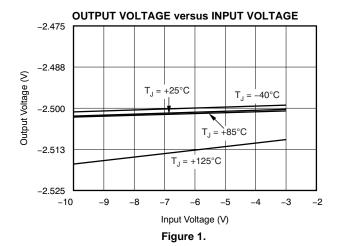

TERMINAL FUNCTIONS

TERMINAL		
NAME	NO.	DESCRIPTION
GND	1	Ground
IN	2	Input supply
EN	3	Bipolar enable pin. Driving this pin above the positive enable threshold or below the negative enable threshold turns on the regulator. Driving this pin below the positive disable threshold and above the negative disable threshold puts the regulator into shutdown mode.
NR	4	Fixed-voltage versions only. Connecting an external capacitor between this pin and ground bypasses noise generated by the internal band gap. This configuration allows output noise to be reduced to very low levels.
OUT	5	Regulated output voltage. The device requires the connection of a small 2.2-µF ceramic capacitor from this pin to GND to ensure stability.

APPLICATION INFORMATION

DEVICE OPERATION

The TPS723xx-Q1 is a low-dropout negative linear voltage regulator with a rated current of 200 mA. It features very low noise and high power-supply rejection ratio (PSRR), making it ideal for high-sensitivity analog and RF applications. A shutdown mode is available, reducing ground current to 2 μA maximum over temperature and process. The TPS723xx-Q1 comes in a small SOT23 package, specified over a $-40\,^{\circ}\text{C}$ to 125°C junction-temperature range.

ENABLE

The enable pin is active above 1.5 V and below -1.5 V, allowing control by a standard TTL signal or by connection to $V_{\rm l}$ if not used. Driving the pin to GND turns off most internal circuitry, putting the TPS723xx-Q1 into shutdown mode, drawing 2- μ A maximum ground current.

CAPACITOR SELECTION FOR STABILITY

Use appropriate input and output capacitors for the intended application. The TPS723xx-Q1 only requires the use of a 2.2-µF ceramic output capacitor for stable operation. Both the capacitor value and ESR affect stability, output noise, PSRR, and transient response. For typical applications, a 2.2-µF ceramic output capacitor located close to the regulator is sufficient.

OUTPUT NOISE

Without external bypassing, output noise of the TPS723xx-Q1 from 10 Hz to 100 kHz is 200 μV_{RMS} typical. The dominant contributor to output noise is the internal band-gap reference. Adding an external 0.01- μF capacitor to ground reduces the noise to 60 μV_{RMS} . To achieve best noise performance, use appropriate low-ESR capacitors for bypassing noise at the NR and OUT pins. See Figure 18 in the Typical Characteristics section.

POWER-SUPPLY REJECTION

The TPS723xx-Q1 offers a very high PSRR for applications with noisy input sources or highly sensitive output supply lines. For best PSRR, use high-quality input and output capacitors.

CURRENT LIMIT

The TPS723xx-Q1 has internal circuitry that monitors and limits output current to protect the regulator from damage under all load conditions. When output current reaches the output-current limit (550 mA typical), protection circuitry turns on, reducing output voltage to ensure that current does not increase. See Figure 8 in the Typical Characteristics section.

Do not drive the output more than 0.3 V above the input. Doing so biases the body diode in the pass FET, allowing current to flow from the output to the input. The device does not limit this current. If this condition is likely, take care to limit the reverse current externally.

THERMAL PROTECTION

As protection from damage due to excessive junction temperatures, the TPS723xx-Q1 has internal protection circuitry. When junction temperature reaches approximately 165°C, the output device turns off. After the device has cooled by about 20°C, the output device turns on, allowing normal operation. For reliable operation, design is for worst-case junction temperature of \leq 125°C, taking into account worst-case ambient temperature and load conditions.

ADJUSTABLE VOLTAGE APPLICATIONS

The TPS72301-Q1 allows designers to specify any output voltage from -10~V to -1.2~V. As shown in the application circuit in Figure 24, use of an external resistor divider scales the output voltage (V_{OUT}) to the reference voltage. For best accuracy, use precision resistors for R1 and R2. Use the equations in Figure 24 to determine the values for the resistor divider.

(1) The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSOLETE: TI has discontinued the production of the device.

(2) Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check http://www.ti.com/productcontent for the latest availability information and additional product content details.

TBD: The Pb-Free/Green conversion plan has not been defined.

Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

Pb-Free (RoHS Exempt): This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

- (3) MSL, Peak Temp. The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.
- (4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.
- (5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.
- (6) Lead/Ball Finish Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.

- A. All linear dimensions are in millimeters.
- B. This drawing is subject to change without notice.
- C. Customers should place a note on the circuit board fabrication drawing not to alter the center solder mask defined pad.
- D. Publication IPC-7351 is recommended for alternate designs.
- E. Laser cutting apertures with trapezoidal walls and also rounding corners will offer better paste release. Customers should contact their board assembly site for stencil design recommendations. Example stencil design based on a 50% volumetric metal load solder paste. Refer to IPC-7525 for other stencil recommendations.

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All semiconductor products (also referred to herein as "components") are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its components to the specifications applicable at the time of sale, in accordance with the warranty in TI's terms and conditions of sale of semiconductor products. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by applicable law, testing of all parameters of each component is not necessarily performed.

TI assumes no liability for applications assistance or the design of Buyers' products. Buyers are responsible for their products and applications using TI components. To minimize the risks associated with Buyers' products and applications, Buyers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI components or services are used. Information published by TI regarding third-party products or services does not constitute a license to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of significant portions of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI components or services with statements different from or beyond the parameters stated by TI for that component or service voids all express and any implied warranties for the associated TI component or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyer acknowledges and agrees that it is solely responsible for compliance with all legal, regulatory and safety-related requirements concerning its products, and any use of TI components in its applications, notwithstanding any applications-related information or support that may be provided by TI. Buyer represents and agrees that it has all the necessary expertise to create and implement safeguards which anticipate dangerous consequences of failures, monitor failures and their consequences, lessen the likelihood of failures that might cause harm and take appropriate remedial actions. Buyer will fully indemnify TI and its representatives against any damages arising out of the use of any TI components in safety-critical applications.

In some cases, TI components may be promoted specifically to facilitate safety-related applications. With such components, TI's goal is to help enable customers to design and create their own end-product solutions that meet applicable functional safety standards and requirements. Nonetheless, such components are subject to these terms.

No TI components are authorized for use in FDA Class III (or similar life-critical medical equipment) unless authorized officers of the parties have executed a special agreement specifically governing such use.

Only those TI components which TI has specifically designated as military grade or "enhanced plastic" are designed and intended for use in military/aerospace applications or environments. Buyer acknowledges and agrees that any military or aerospace use of TI components which have *not* been so designated is solely at the Buyer's risk, and that Buyer is solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI has specifically designated certain components as meeting ISO/TS16949 requirements, mainly for automotive use. In any case of use of non-designated products, TI will not be responsible for any failure to meet ISO/TS16949.
